Rail Unloading Dust Control

Associates, Inc.

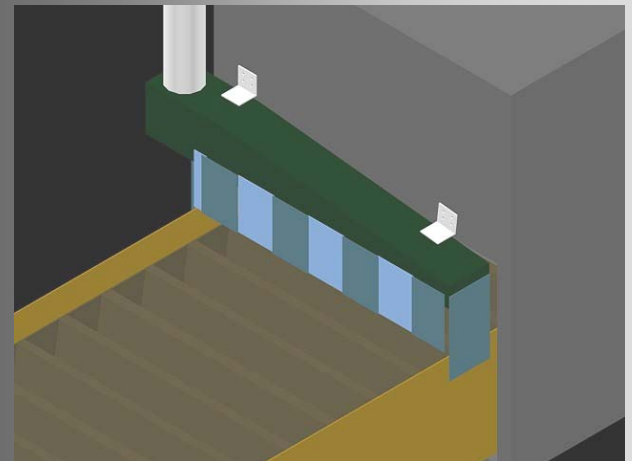

Systems include Model 4/12 "TD" Dust Collector, 40 HP Vacuum Fan Assembly, Combination Motor Starter and Control Panel, galvanized Quick-fit Duct, multiple Dust Capture Hoods, Floor Sweep and system Engineering.

"Firefly" fire protection with Control unit, IR detectors, full cone water nozzles, high pressure water pump, and tank are included.

Slotted Compound Hoods are provided with vinyl curtains and placed strategically at conveyor to conveyor transfers.

Extreme capture velocities are designed in the system due to larger than normal dust loads and high speed conveyors.

The "TD" Dust Collector does not require any maintenance and cleaned by periodically shaking. The Quick-fit Dust Manifold is expandable. Dust Sleeves are 99.9% efficient (over 10 micron). Each sleeve includes vertical static wire and two viewports. Containment drums are galvanized with lifting handles and Quick-fit sleeve connections.
